Timofey Filichev

Unity / C# Developer

+7(915)843-27-99 • @the_biggestttt • filichev.tp@phystech.edu • Filiaaa

Third-year MIPT (FPMI) student and Unity developer with ~7 years of hands-on experience in Unity and C#. Shipped a commercial 2D game as the sole programmer: from prototype to release on Steam, itch.io and VK. Strong engineering background in systems programming (C++, Go).

Skills

Game Development:
- Unity (~7 years), C# (advanced): gameplay systems, scenes, UI, animations, asset integration, builds and releases
- Unity packages: NavMesh, DOTween, Odin Inspector & Odin Serializer
- Custom tooling: node-based dialogue system built on Unity's built-in graph tools
- Rapid prototyping of game ideas in Unity and Construct
- Publishing: Steam, itch.io, VK, Yandex Games

Art & Design Tools: Aseprite (pixel-art sprites, intermediate), Figma (level design and planning), Photoshop, Blender (basics)
Other Programming Languages: C++ (17/20/23, templates, concepts), Go (concurrency), C, Java, Bash, Assembly
Tools & Environment: Git (advanced), Linux (Ubuntu), LaTeX
Languages: Russian (native), English (intermediate), Chinese (5 years of study)

Work Experience

Unity Developer (sole programmer) – The Ballad of a True Thug **2023 – present**
- Developed a commercial 2D game in Unity (C#) as the only programmer in the team; released on Steam, itch.io and VK
- Owned the full development cycle: game design, gameplay programming, UI, animations, asset integration, testing, builds and release
- Designed and built a custom node-based dialogue system on top of Unity's built-in graph tools to speed up content creation
- Used NavMesh for AI movement, DOTween for animations and UI, Odin Inspector / Serializer for editor workflow and data

Projects

Game Prototyping
- Built game prototypes in Unity and Construct to test mechanics quickly; used Figma for level layouts and Aseprite for sprites

C++ Projects (MIPT, Artem Dolta) **2025 – present**
- func::result: monadic Result<Ok, Err> type for exception-free error handling with composable combinators and zero-overhead storage
- CompactTuple: std::tuple analog that reorders types at compile time to minimize padding

Go Projects (MIPT, Pavel Kosicin) **2025 – present**
- gitfame: CLI utility for Git repository authorship analysis (lines, commits, files per author); filters by extension, language and glob; 4 output formats
- Implemented synchronization primitives from scratch: once, rwmutex, waitgroup, cond

Education

Bachelor's Degree, MIPT **2024 – 2028**
FPMI, "Systems Programming"
Overall GPA: 8.9/10 (first two years)

Achievements & Activities

Participant, "Kod Sporta" hackathon by T-Bank. Badminton (7 years, competitive), dancing (7 years), chess (5 years).
